

Version Control using Git

Assignment 2

Note: *To complete this assignment, Learners need to work in pair.*

Working with Pull request in GitHub

1. Learner would fork a repository from his/her partner's GitHub repository
2. Make some local changes and commit them.
3. Verify the changes in 'diff' using compare page
4. Create a Pull request by giving appropriate title and description
5. Learner's partner would review the proposed changes and merge them in their own repo.
6. Repeat the process and do the role reversal.
